

Keyboard Tricks

Although it's not immediately obvious, the keyboard can generate accents, acutes, and many other foreign characters and symbols.

Holding the letter “u” or “e” generates lots of variants. Just slide your finger along till you reach the one you want and it will be inserted into the document.

Also, when you use Safari you don't have to enter “.co.uk” in URLs — the “.com” key will produce other endings if you touch and hold the key.

Hot tip

For accents and other additional characters, touch the key then slide your finger to the character you want to use.
