Your Child Needs an iPad

For a parent, the thought of your child having an iPad can be a daunting one. Will they look after it? Will they use it productively? Will they be safe? This chapter introduces using an iPad with your child and shows some of the ways it can be used effectively.

- 8 The iPad Revolution**

- 21 Obtaining an Apple ID**
- 22 Security Overview**

The iPad Revolution

Apple Computers has the happy knack of turning the way we look at the world of computing on its head. The first most dramatic example of this was the introduction of the iMac: an all-in-one desktop computer that was so stylish that people wanted to have it on display rather than hide it away in a study or a spare bedroom. This was followed by the iBook and the MacBook: laptops that quickly featured in a range of hip and savvy television programs and films. But the two products that propelled Apple into the real mainstream of consumer electronics were the iPod and the iPhone. The iPod quickly became the number one MP3 device for playing digital music and the iPhone followed by taking the smartphone market by storm. The iPod and the iPhone ensured that Apple was no longer simply viewed as a manufacturer of computers, albeit very iconic ones.

Hot tip

If your iPad ever freezes, or if something is not working properly, it can be re-booted by holding down the **Home** and **On/Off** button for 10 seconds and then turning it on again (see page 24 for details of the controls on the iPad).

Don't forget

In October 2012 the iPad Mini was introduced, which is a 7.9-inch version of the iPad, as opposed to the standard 9.7-inch version.

The i What?

Following on from the success of its other i devices, Apple introduced the first iPad in January 2010. Initially, sceptics scratched their heads in a rather puzzled fashion: what was the iPad exactly? It seemed to lack the productivity to replace a traditional laptop and it was too large to be just a communications device. But, as is their habit, Apple had launched the right product at exactly the right time. The iPad is a tablet computer that is compact, has a longer battery life than a laptop and has a range of functionality for both work and entertainment. Because of its size, it is easily carried in a bag, or even a large pocket, and has Wi-Fi and, in some versions, 3G/4G connectivity to the Web. And of course the design has the usual Apple wow-factor and immediately makes people want to have one as soon as they see it. This, added to a number of celebrity endorsements, has ensured that, with the iPad, the era of the tablet computer has well and truly arrived.

A Perfect Match

For adults, who have grown up with the evolution of the desktop PC, the iPad can initially seem like something of a strange beast – it is almost too good at what it does; being able to handle most computing tasks while still being stylish and compact. But for children it is a perfect match. Untainted by the times when computers only came in beige boxes, today's children are used to mobile computing devices that let them communicate, study and play in as easy a way as possible. In this respect the iPad ticks all of the boxes. Also, being a style icon does no harm in terms of its appeal to children.

Some of the areas in which the iPad is ideal for children are:

- **Appearance.** In an era where brand is more important than ever before, the name Apple is one of the most recognizable among children. The iPad is seen as something that children are more than happy to show to their peers and, rather than being seen as a dull computer, it is much sought-after, partly because of its stylish appearance and its brand appeal
- **Battery life.** Children have busy, active lives and they do not want to have to worry about constantly charging their mobile devices. With a battery life of up to 10 hours, the iPad ensures that frustration with recharging is kept to a minimum
- **Size.** The iPad is compact enough to be put in a jacket or a school bag and big enough to be used effectively for most computing tasks
- **Apps.** The iPad comes with a range of its own apps (programs) and there are thousands more that can be downloaded from the App Store. These cover everything from entertainment to education. Some of them are free while others have to be paid for. But there will almost certainly be an app for whatever interests your child

Beware

iPads are not inexpensive so safeguards should be taken to prevent them being lost or stolen from you child. See Chapter Three for more information about physical security.

Using an iPad

Any parent, grandparent or teacher who is responsible for a child using an iPad will want to know exactly what can be done with it. Because of its versatile nature this may depend on the child's creativity and inventiveness, but the using the iPad can be broken down into two main categories:

- Using iPad apps
- Using App Store apps

Hot tip

To download apps from the App Store, the user will need an Apple ID. Since some apps have to be paid for, it is best if this is set up, and administered, by an adult rather than give control of it to a child. See page 21 for details about obtaining an Apple ID.

iPad apps

iPad apps are those that come pre-installed with the iPad. These can be accessed from the icons on the iPad Home screen:

- **App Store.** This can be used to access the App Store, from where additional apps can then be downloaded
- **Calendar.** An app for storing appointments, important dates and other calendar information. It can be synced with iCloud
- **Clock.** This can be used to view the time in different countries and also as an alarm clock and a stopwatch
- **Contacts.** An address book app. Once contacts are added here they can then also be accessed from other apps, such as Mail

...cont'd

- **FaceTime.** This is an app that uses the built-in FaceTime camera on the iPad to hold video chats with other iPad users, or those with an iPhone, iPod Touch or a Mac computer
- **Game Center.** For those who like gaming, this is an app for playing a variety of games, either individually or with friends
- **iBooks.** This is an app for downloading electronic books, that can then be read on the iPad. This can be done for plain text or illustrated iBooks. Although this is considered a built-in app, it has to be downloaded from the App Store first
- **iTunes.** This app can be used to browse the iTunes store where music, TV shows, movies and more, can be downloaded to your iPad
- **Mail.** This is the email app for sending and receiving email on your iPad
- **Maps.** Use this app to view maps from around the world, find specific locations and get directions to destinations

- **Messages.** This is the iPad messaging service, that can be used between iPads, iPhones, iPod Touches and Mac computers. It can be used with not only text but also photos and videos

Don't forget

To use FaceTime the other user has to have iOS 5, or later, on their iPad, iPhone or iPod Touch or OS X Lion (7.2 or later) on their Mac.

Hot tip

11

Items in apps including Calendar, FaceTime, Game Center, Mail, Messages and Reminders can be flagged up in the Notification Center. This is accessed by dragging downwards from the top of the iPad screen.

...cont'd

- **Music.** An app for playing music on your iPad and also viewing cover artwork. You can also use it to create your own playlists
- **Newsstand.** Similar to iBooks, this app can be used to download and read newspaper and magazine subscriptions

- **Notes.** If you need to jot down your thoughts or ideas, this app is just perfect for that
- **Photo Booth.** A photography app that can be used to create distorted and special effects photos of people or objects

- **Photos.** This is an app for viewing and editing photos and creating slideshows
- **Reminders.** Use this app for organization, when you want to create to-do lists and set reminders for events
- **Safari.** The Apple Web browser that has been developed for viewing the Web on your iPad
- **Videos.** This is an app for viewing videos on your iPad and also streaming them to a larger HDTV monitor

Using an iPad Together

Once your child has an iPad there will be many occasions when they will want to use it on their own, for either studying, playing games or communicating with their friends. However, you should try to ensure that it is not solely a solitary pastime: try to develop the feeling that using the iPad can also be a shared experience. This can help you understand how your child is using the iPad and you can also discuss any potential problems.

Talk openly about what you expect the iPad to be used for and aim to create mutual trust about a balance between using it as

a study tool and also an entertainment center. But most of all, try to make sure that you and your child can make using the iPad together an enjoyable experience.

When you are using the iPad with your child there are some areas you should think about:

- Offer support and help when needed but be prepared to take a back seat if your child is coping well without your help. Try not to take over, even if you think you know best
- Be prepared to learn yourself. It is sometimes a hard fact to accept, but there are times when our children know more than we do! So look forward to learning new skills and embrace the chance to let your child teach you
- Talk openly about potential problem areas. These could include inappropriate websites and issues about talking to strangers on message boards. If you can talk honestly about these things then your child is more likely to come to you if there is a problem

Hot tip

Try to find a shared interest with your child on the iPad, such as a hobby you can research, or a game you can play together and compare your scores.

An Education Tool

In terms of exactly what an iPad should be used for, there may be some divergence of opinion between parents and their offspring: with the former championing it as an education tool and the latter favoring it as a games and communications device. However, the good news is that the education elements of the iPad can be a lot of fun in themselves, so a happy compromise should be easy to achieve. There are two ways in which the iPad can be used as an education tool:

- **Productivity apps.** These are apps that can be used for producing, saving, sharing and printing school work
- **Learning apps.** These are education apps that can be used for learning for all ages

Don't forget

Pages, Numbers and Keynote have to be paid for, but they are less expensive than their Microsoft Office counterparts.

Productivity apps

The three main apps for this are:

- **Pages**, for word processing
- **Numbers**, for spreadsheets and databases
- **Keynote**, for presentations

Don't forget

For more information about using productivity apps, see Chapter Six.

These apps can be downloaded from the App Store and files can also be saved into formats compatible with Microsoft Office programs, Word, Excel and PowerPoint.

...cont'd

Learning Apps

Learning apps can be downloaded from the App Store and there is a huge range of them, covering all age groups.

Pre-school children are catered for with early-learning apps covering reading, writing and counting.

For older children there are apps for all of the main subjects that are likely to be studied at school.

Hot tip

Languages are covered in the Education category within the App Store and there are FlashCards for several languages including French, Spanish, Chinese, Korean and Indonesian.

An Entertainment Tool

When a child picks up an iPad their first port of call may not be an app to do their English or science homework (but hopefully this will come later). Instead they are more likely to focus on the entertainment functions available. These fall broadly into two categories:

- **Media.** Apps for accessing photos, music and videos
- **Games.** There thousands of games apps that can be downloaded from the App Store. These can be played independently, or through the Game Center app

Media

For viewing and editing music, photos and video, the apps with the same name can be used. These apps can display graphical covers when playing music and create artistic slideshows for viewing photos.

Don't forget

For more information about using photo, music and video apps, see Chapter Seven and Eight.

Apps such as iTunes and Photos can also be used to download music from the iTunes Store and edit photos respectively.

...cont'd

Game Center

The pre-installed Game Center app enables you to play a range of games, either by yourself or with like-minded people with an iPad, iPhone or iPod Touch. This will link to a game-playing network where you can compare scores against individuals or join a multiplayer game.

Don't forget

Within the Games category there are sections for New & Newsworthy, What's Hot and What We're Playing.

App Store Games

The App Store has a range of games for all tastes and ages. Browse through them on the Games category page or type in a keyword in the search box to find a specific game.

Don't forget

For more information about using games apps, see Chapter Eight.

A Window to the World

No computer, or mobile device, is complete without access to the Internet and the Web. On the iPad this is provided by the Safari Web browser app. This provides standard access to the Web, but with one main difference for the traditional computer user.

What, no mouse?

The iPad has no mouse, something that may confuse users from the generation that grew up with this ubiquitous pointing device. However, times move on and the navigation on the iPad is done by a collection of taps, swipes and pinching gestures. These are known as Multi-Touch Gestures and they are used to navigate Web pages within Safari. Two of the main areas are:

Scrolling

To move up and down Web pages, swipe in the opposite direction to the one in which you want the page to move:

Zooming

To zoom in on an item on a Web page, pinch outwards with thumb and forefinger (or double-tap with one finger):

Don't forget

All of the navigation on an iPad is done with Multi-Touch Gestures and these are looked at in detail in Chapter Two.

Beware

Multi-Touch Gestures can take a bit of getting used to, so don't panic if you cannot get the hang of them immediately. However, children tend to take to them with great ease.

Communicating with an iPad

The younger generation live in a world in which they expect to be fully connected with their friends in a range of digital ways: phone, text, email, messaging (text and video) and social networking. The iPad caters for most of these needs so that your child is only ever a click away from their friends.

Mail

This is the email app on the iPad. An account can be set up with the free Apple iCloud service or settings for an existing account can be added.

Beware

Sometimes you can get too much of a good thing and so some forms of communications by your child may need to be monitored. This can include messaging and social networking in particular.

When receiving email, attachments can be viewed directly within mail without having to open them separately.

Don't forget

For more information about using Safari and Mail on the iPad, see Chapter Nine.

...cont'd

iMessages

This is the text messaging service on the iPad that can be used for free with other iPad, iPhone and iPod Touch users. It works with the Messages app, over Wi-Fi or 3G/4G networks, and messages can also include photos and videos that you have on your iPad.

Don't forget

Text messages in Messages are typed with the virtual keyboard that appears when you are ready to create a new text message.

FaceTime

FaceTime is an app that enables you to make video calls over Wi-Fi or 3G/4G networks with other iPad, iPhone, iPod Touch or Mac computer users. You have to sign in with an Apple ID (see next page) and an email address and once you have done this you can then make video calls:

Don't forget

For more information about using Messages and FaceTime on the iPad, see Chapter Nine.

The FaceTime camera is the one facing you when you are looking at the screen. The other camera on the iPad cannot be used for FaceTime calls.

Obtaining an Apple ID

An Apple ID is a registered email address and password with Apple that enables you to log in and use a variety of Apple services. These include:

- App Store
- iTunes Store
- iCloud
- iMessage
- FaceTime
- Game Center
- iBooks

It is free to register for an Apple ID and this can be done when you access one of the apps or services which requires this, or you can do it on the Apple website at My Apple ID:

- 1 Tap once on the **Create an Apple ID** button

Create an Apple ID

- 2 Enter your email address and a password

Create an Apple ID.

Choose an Apple ID and password.
Enter your primary email address as your Apple ID. This will be used as the contact email address for your account. Please note that this email address must be verified before you can use certain Apple services.

Apple ID: @me.com

Password:

Confirm Password:

Create a security question.
Select a security question or create one of your own. This question will help us verify your identity should you forget your password.

- 3 Enter additional details such as date of birth and address. Enter the security code and tap once on the **Create Apple ID** button

Please type the characters you see in the image below.

QCTGR

QCTGR Select and drag over the letters

I have read and agree to the [Apple Terms of Service](#) and [Apple Customer Privacy Policy](#).

Create Apple ID

Hot tip

If you are using an Apple ID to buy items, such as from iTunes or the App Store, you will need to provide a valid method of payment.

Don't forget

My Apple ID is where you can access your Apple ID details and edit them, if required.

Don't forget

When you register for your Apple ID you will be sent a verification email to the email address that you have provided. Follow the instructions in it to complete the registration process.

Security Overview

There is almost no limit to the ways in which an iPad can be used for education, entertainment and communication. However, for any parent, grandparent or teacher, one of the main concerns will be security. This falls into two main categories:

- **Physical security.** This covers ensuring, as much as possible, that your child's iPad is not lost or stolen
- **iPad security.** This covers what can, and cannot, be done on the iPad and the Web

Don't forget

For an in-depth look at security and restrictions, see Chapter Three.

Physical security

Some areas to bear in mind once your child has an iPad are:

- **Where is it going to be used?** If the iPad is only going to be used in the home then this represents less of a security risk. However, if it is going to be taken to different places then some consideration should be taken about how to keep it safe
- **If it is being carried around is it inconspicuous?** Since an iPad is a small, and valuable, item it can be an easy target for anyone trying to steal it. Therefore it is advisable to keep it out of view when it is being carried around
- **Is it insured?** Insurance can be obtained for an iPad when you buy it or it may be covered by household insurance. However, check any policies carefully to ensure that they provide sufficient cover

iPad security

Within the **Settings** app of the iPad are a number of restrictions that can be applied to a range of apps and content:

Allowed Content:	
Ratings For	United Kingdom ➞
Music & Podcasts	Explicit ➞
Movies	All ➞
TV Shows	All ➞
Books	All ➞
Apps	All ➞
In-App Purchases	ON <input checked="" type="checkbox"/>
Require Password	15 minutes ➞
