

Further guidance on installation of the MySQL Server is available at <http://dev.mysql.com/doc/refman/5.6/en/installing.html>

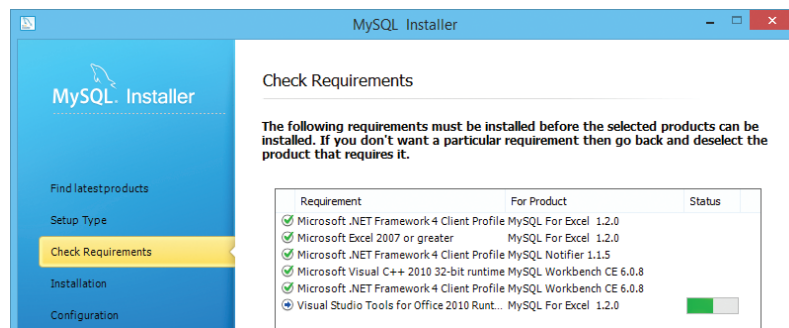

# Installing the MySQL Server

The MySQL database server, which provides “back-end” storage for data-driven websites, is available for Windows, Mac OS X, and Linux operating systems as a free download at [mysql.com](http://mysql.com).

- 1 Download the MySQL Community Edition installer for your system from [mysql.com/downloads/mysql](http://mysql.com/downloads/mysql)
- 2 Run the installer and select “Developer Default” when asked to choose a Setup Type

- 3 Ensure you have an Internet connection then allow the installer to download any missing setup requirements

- 4 When all requirements have been downloaded push the Execute button to install MySQL on your system

After installation the MySQL Server must then be configured.

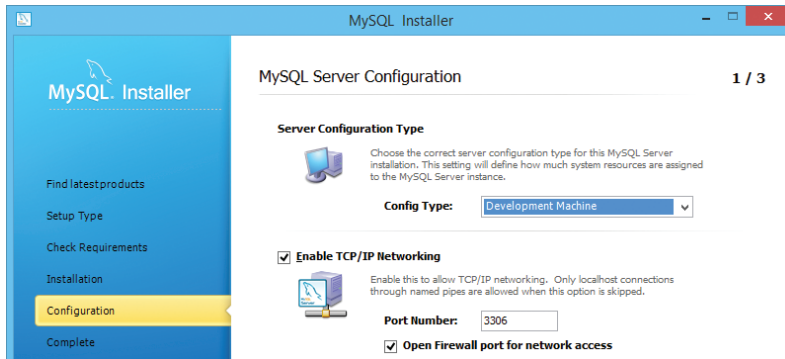

## MySQL Installer

The MySQL Installer can be launched at any time from the Start Menu to change the configuration or to install updates.

...cont'd

5

Next choose “Development Machine” as the Server Type to begin the MySQL Configuration process

By default the MySQL Server uses port 3306. If you are running a firewall you may need to specifically allow the MySQL Server connections via this port. Refer to your firewall documentation for further guidance.

6

Then enter a root user password of your choice twice into the Password fields and click Next

19

7

Now accept the suggested Windows Service Name and choose to run the service as a Standard System Account to complete configuration of the MySQL installation

Ensure that your MySQL Server Configuration completes successfully before continuing. If necessary repeat the installation process.
