It’s compact, it’s stylish, it’s powerful, and it’s perfect for anyone, of any age. This chapter introduces the iPad and its iOS 9 operating system so you can quickly get up and running with this exciting tablet.
The iEverything

The iPad is a tablet computer that has gone a long way to change how we think of computers and how we interact with them. Instead of a large, static object it is effortlessly mobile and even makes a laptop seem bulky by comparison.

But even with its compact size, the iPad still manages to pack a lot of power and functionality into its diminutive body. In this case, small is most definitely beautiful and the range of what you can do with the iPad is considerable:

- Communicate via email, video and text messaging.
- Surf the Web wirelessly.
- Add an endless number of new ‘apps’ from the Apple App Store.
- Use a range of entertainment tools, covering music, photos, video, books and games.
- Do all of your favorite productivity tasks such as word processing, creating spreadsheets or producing presentations.
- Organize your life with apps for calendars, address books, notes, reminders and much more.

Add to this, up to 10 hours battery life when you are on the move, a range of different sizes (with a Retina Display screen of outstanding clarity) and a seamless backup system, and it is clear why the iPad can stylishly fulfill all of your computing needs.
Simplicity of the iPad

Computers have become a central part of our everyday lives, but there is no reason why they need to be complex devices that have us scratching our heads as to how to best use them. The iPad is not only stylish and compact, it also makes the computing process as simple as possible, so you can concentrate on what you want to do. Some ways in which this is done are:

- **Instantly on.** With the iPad there is no long wait for it to turn on, or wake from a state of sleep. When you turn it on, it is ready to use; it’s as simple as that.

- **Apps.** iPad apps sit on the Home screen, visible and ready to use. Most apps are created in a similar format, so once you have mastered getting around them you will be comfortable using most apps.

- **Settings.** One of the built-in iPad apps is Settings. This is a one-stop shop for customizing the way that your iPad looks and operates and also how settings for apps work.

- **Dock and App Switcher Window.** These are two functions that enable you to access your favorite apps quickly, regardless of what you are doing on your iPad.

- **Home button.** This enables you to return to the main Home screen at any time. It also has some additional functionality, depending on how many times you click it.
Choosing your iPad

Models and Sizes

Since its introduction in 2010, the iPad has evolved in both its size and specifications. It is now a family of devices, rather than a single size. When choosing your iPad, the first consideration is which size to select. There are three options:

- **Standard iPad.** This is the original size of the iPad. It measures 9.7 inches (diagonal) and has a high resolution Retina Display screen. The latest version, released in October 2014, is the iPad Air 2 which is the sixth generation of the standard size iPads.

- **iPad Mini.** The iPad Mini is similar in most respects to the larger version, including the Retina Display screen, except for its size. The screen is 7.9 inches (diagonal) and it is also slightly lighter. The latest version, released in September 2015, is the iPad Mini 4.

- **iPad Pro.** This is the latest size of the iPad to be introduced and it is aimed more at a replacement for laptop computers. It comes with a 12.9 inch screen. The iPad Pro can also be used with the Apple Pen stylus and the detachable Apple Smart Keyboard.

In terms of functionality there is little difference between the iPad Air and the iPad Mini, and the choice may depend on the size of screen that you prefer. Both the iPad Air 2 (and later) and the iPad Mini 3 (and later) have Touch ID functionality, whereby the Home button can be used as a fingerprint sensor for unlocking the iPad.

Another variation in the iPad family is how they connect to the internet and online services. There are two options:

- **With Wi-Fi connectivity.** This enables you to connect to the internet via a Wi-Fi router, either in your own home, or at a Wi-Fi hotspot.

- **With Wi-Fi and 4G connectivity (where available, but it also covers 3G).** This should be considered if you will need to connect to the internet with a cellular connection when you are traveling away from home.
Specifications Explained

When choosing your iPad there are now a lot of available models, not just the most recent iPad Air 2, iPad Mini 4 or iPad Pro. Some of the specifications to consider are:

- **Processor:** This determines the speed at which the iPad operates and how quickly tasks are performed.

- **Storage:** This determines how much content you can store on your iPad. Across the iPad family, the range of storage is 16GB, 32GB, 64GB or 128GB.

- **Connectivity:** The options for this are Wi-Fi and 3G/4G connectivity for the internet, and Bluetooth for connecting to other devices over short distances.

- **Cameras:** The front-facing camera is a FaceTime one, which is best for video calls. The back-facing camera is a high resolution iSight one that takes excellent photos and videos.

- **Screen:** Look for an iPad with a Retina Display screen for the highest resolution and best clarity. This is an LED-backlit screen and is available on the latest iPads.

- **Operating System:** All versions of the iPad (from iPad 2 onwards) run on the iOS 9 operating system.

- **Battery power:** This is the length of time the iPad can be used for general use, such as surfing the web on Wi-Fi, watching video, or listening to music. All models offer approximately 10 hours of use in this way.

- **Input/Output:** These include a Lightning connector port (for charging), 3.5 mm stereo headphone minijack, built-in speaker, microphone and nano-SIM card tray (Wi-Fi and 4G model only).

- **Sensors:** These are used to access the amount of ambient light and also the orientation in which the iPad is being held. The sensors include an accelerometer, ambient light sensor and gyroscope.
Before you Switch On

The external controls for the iPad are simple. Three of them are situated at the top of the iPad and the other is in the middle at the bottom. There are also two cameras, one on the front and one on the back of the iPad.

Controls

The controls at the top of the iPad are:

On/Off button

Cameras. One is located on the back, underneath the On/Off button and one on the front, top

Volume Up or Down buttons

Home button. Press this once to wake up the iPad or return to the Home screen at any point:

Speakers. The speakers are located on the bottom edge of the iPad:

Lightning connector. Connect the Lightning connector here to charge the iPad, or connect it to another computer. (See page 18 for more information on the connector for previous versions of the iPad.)
Getting Started

To start using the iPad, hold down the On/Off button for a few seconds.

Initially there will be a series of setup screens to move through before you can use the iPad. These include the following options (a lot of these can be skipped during setup and accessed later from the Settings app):

- **Language**. Select the language you want to use.
- **Country**. Select the country in which you are located.
- **Location Services**. This determines whether your iPad can use your geographical location for apps that use this type of information (such as Maps).
- **Wi-Fi network**. Select a Wi-Fi network to connect to the internet. If you are at home, this will be your own Wi-Fi network, if available. If you are at a Wi-Fi hotspot then this will appear on your network list.
- **Apple ID**. You can register with this to be able to access a range of Apple facilities, such as iCloud, purchase items on iTunes or the App Store, FaceTime, Messages and iBooks. You can also create an Apple ID when you access one of the relevant apps for the first time.
- **iCloud**. This is Apple’s online service for backing up content and sharing it with other people and family members, using the new Family Sharing service.
- **Find My iPad**. This is a service that can be activated so that you can locate your iPad if it is lost or stolen. This is done via the online iCloud site at www.icloud.com
- **Diagnostic information**. This enables information about your iPad to be sent to Apple.
- **Register**. This enables you to register your iPad with Apple, as the registered owner.
- **Start using**. Once the setup process has been completed you can start using your iPad.

For details about obtaining an Apple ID see page 87.

For more information about using iCloud see pages 36-39.

The Find My iPad function can be set up within the iCloud sections of the Settings app (see pages 180-181).
About iOS 9

iOS 9 is the latest version of the operating system for Apple’s mobile devices including the iPad, the iPhone and the iPod Touch.

iOS 9 is an evolution of iOS 8, which followed iOS 7, one of the most dramatic cosmetic changes to the operating system in its history. It produced a flatter, cleaner design and this has been continued with iOS 9, which is not greatly different in appearance to its predecessor.

Linking it all up

One of the features of iOS 9 is the way it links up with other Apple devices, whether it is something like an iPhone also using iOS 9, or an Apple desktop or laptop computer running the OS X El Capitan operating system. This works with apps such as Mail and Photos, so you can start an email on one device and finish it on another, or take a photo on one device and have it available on all other compatible Apple devices. Most of this is done through iCloud and once it is set up it takes care of most of these tasks automatically. (See pages 36-45 for details about setting up and using iCloud, the iCloud Drive and Family Sharing.)

New and improved apps

iOS 9 comes with improved options for productivity, through the function of viewing more than one app on the screen at the same time (on certain models of iPad). There are also improvements to the Notes app so that lists can easily be created and photos added to notes. A new addition is the News app, which can display news items from a variety of organizations, covering a wide range of topics. The Music app now provides access to Apple Music, a new service that is the gateway to the entire iTunes music library.

iOS 9 is a stylish and versatile operating system on the iPad. It also plays an important role in linking desktop and mobile devices so that users can spend more time doing the things that matter to them, safe in the knowledge that their content will be backed up and available across multiple devices.

To check the version of the iOS, look in Settings > General > Software Update.
Home Screen

Once you have completed the setup process you will see the Home screen of the iPad. This contains the built-in apps:

At the bottom of the screen are four apps that appear by default in the Dock area.

Rotate the iPad, and the orientation changes automatically.

There are 34 different wallpaper backgrounds for iOS 9 on the iPad. These can be found in Settings > Wallpapers. Some of the wallpapers are Dynamic, which means that they appear to move independently from the app icons when you tilt the iPad. The other backgrounds are Stills and you can also use your own pictures from the Photos app. The examples used in this book are from the Dynamic range.

Items on the Dock can be removed and new ones can be added. For more details see pages 22-23.
Home Button

The Home button, located at the bottom, middle of the iPad, can be used to perform a number of tasks:

1. Click once on the **Home** button to return to the Home screen at any point.
2. Double-click on the **Home** button to access the **App Switcher** window. This shows the most recently-used and open apps.
3. Press and hold on the **Home** button to access the Siri voice assistant function.

For more details about the App Switcher see page 24.

For more information about using the iPad search facilities, see pages 32-35.
Opening Items

All apps on your iPad can be opened with minimum fuss and effort:

1. Tap once on an icon to open the app

2. The app opens at its Home screen

3. Click once on the **Home** button to return to the Home screen

4. From the App Switcher window, swipe between apps and tap on one to open it directly

For details about closing items see page 25.
Charging your iPad

The iPad comes with a Lightning connector to USB Cable and a USB Power Adapter, for charging the iPad:

1. Connect the USB end of the Lightning connector to the Power Adapter

2. Connect the other end of the Lightning connector to the iPad

3. Plug in the Power Adapter

Some previous versions of the iPad have a Dock connector, with 30 pins, instead of a Lightning connector, which only has 8 pins.

If you have older accessories with Dock connector points you can buy a Lightning to 30-pin adapter so that you can still use them with a fourth generation (and later) iPad.

The iPad can also be charged by connecting it with the Lightning connector to another computer. However, this has to be another Mac computer and, if it is a MacBook, it also has to be plugged in for the iPad to charge.
