

Adding Widgets

Android widgets are similar to apps, except that they generally display specific content or real-time information. For instance, a photo gallery widget can be used to display photos directly on a Home screen, and a traffic widget can display updated information about traveling conditions. Widgets can be added from any Home screen:

- 1 Press and hold on an empty area on any Home screen and tap on the **Widgets** button

- 2 Swipe up and down to view all of the available widgets

- 3 Press and hold on a widget and drop it onto a Home screen as required, in the same way as for adding apps

Widget icons on the Home screen usually appear larger than those for standard apps.
