

Customize Your Theme

WordPress themes come with several default options such as tagline, header image, background color, etc. However, the default theme options can be customized via the WordPress admin dashboard. To customize WordPress theme options:

- 1 Log in to your WordPress dashboard
- 2 From the menu in the dashboard, click **Appearance > Customize**

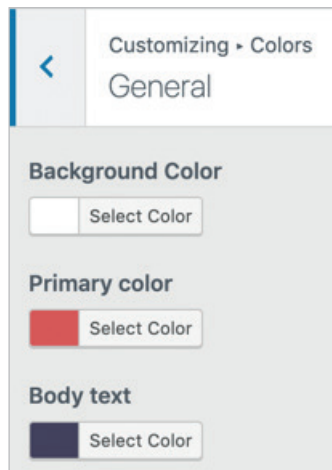

The options you get will depend on the theme you have installed. The options shown in the screenshots on this page come from a free theme called Sydney.

You will notice a number of customizable options down the left-hand side, along with a web preview down the right-hand side.

The web preview will update when you change one of the element options.

For example, here you can customize the background color, primary color and body text.

There are many other elements you can customize without having to use any code.

Once you have finished, click **Publish** to update the live website.
