Resizing Tiles

As well as rearranging tiles, their sizes can also be edited on the Start menu. Depending on the specific Windows app, there may be up to four options for resizing tiles in Windows 10 – Small, Medium, Wide, and Large, with the initial selection made for you:

1. Right-click on a tile to select it, and click on the **Resize** button from the context menu that appears.

2. The current size of the tile is shown with a tick next to it.

3. Click on another option to resize the tile.

4. If the size is made smaller, the tile is reduced in size and a gap appears around it (unless there is another tile small enough to fill the space next to it).

5. For a wide tile, there will be options for making it **Large**, **Medium** or **Small**.

Some apps only have options for Small or Medium sizes.

The **Large** size is a good option for a tile that can then be used as a Live Tile, to display its contents or real-time information.
